Introduction

The Report Style Guide describes the design and layout of the Uniform Residential Appraisal Report (URAR), Restricted Appraisal Update Report (“Appraisal Update”), and Completion Report. It includes specifications for the sizes and positioning of all elements that could appear in any of these reports, regardless of conditionality.

Part 1 describes in detail the basic page layout used throughout, along with the headers, footers, main headings, and subheadings. This is followed by a description of each text element that can appear in the reports and specifications for each table element.

- Appendix E-1: Report Style Guide Supplement – URAR with Codes shows a marked-up report with the codes indicated.

Part 2 outlines each URAR report section in detail and notes any exceptions to the elements described in Part 1 of the Report Style Guide.

Finally, Parts 3 and 4 are set aside for the Appraisal Update and the Completion Report. While these two reports follow the same basic page layout and elements of the URAR, they are separate from it, and are described here in detail.

- Appendix E-2: Report Style Guide Supplement – Restricted Appraisal Update Report with Codes shows a marked-up report with the codes indicated.
- Appendix E-3: Report Style Guide Supplement – Completion Report with Codes shows a marked-up report with the codes indicated.

Part 1. Design

General Design

This chapter includes specifications for the overall design elements that apply to all pages of the URAR, Appraisal Update, and Completion Report. The overall measurements of the page in the report are defined in inches (see page 8). All other layout measurements in the Style Guide use typographic standards (see “Units Used in this Guide” below).

Font

Myriad Pro is the preferred font. Calibri may be used as an alternative; however, this change may affect the length and pagination of the report, e.g., line breaks within the individual certifications.

The Appendix C Layouts were designed on a particular platform with a design program. Not every design program matches others perfectly. The goal is to match the PDFs provided in the report layouts (Appendix C-1, C-2, C-3) and sample scenarios (Appendix D-1, D-2, D-3).

For an example of a report using Calibri, see Appendix D-1: Sample Scenario SF5-A.

Units Used in Style Guide

In this guide, the two units of measurement used in describing the widths of elements are points and picas.

A point is equal to 1/72 inch (72 points in an inch). 1 pica is equal 1/6 of an inch (or 12 points). 6 picas equal 1 inch; 3 picas equal ½ inch.

Picas are often used for fixed horizontal measurements (most often column width). Picas are often abbreviated as “p” (such as 16p). Picas are usually represented with points in this fashion: (picas)p(points), for example: 3p9 or 2p6. For example, the standard width for one column of text on this two-column grid document is 22 picas and 0 points (normally abbreviated as 22p0).

SOME PICAS TO INCHES CONVERSIONS

Picas	Points	Inches	Picas	Points	Inches
0p4.5	4.5 pt	1/16"	3p9	45 pt	5/8"
0p9	9.0 pt	1/8"	4p1.5	49.5 pt	11/16"

2p7.5	31.5 pt	7/16"	6p0	72 pt	1"
3p0	36.0 pt	1/2"	12p0	144 pt	2"
3p4.5	40.5 pt	9/16"	18p0	216 pt	3"

Terminology Used in Style Guide

1. In this guide, **rule** refers to all lines in the report. For example, the “line” above these sentences is a 1-½ point rule. **Offset** refers to the space between the base of text and the rule below it. For example, the rule above these sentences is offset 4 points from the heading above it.

RULE AND OFFSET

2. **Vertical spacing** between lines of text, sometimes called line spacing, is measured from the base of one line of text to the base of the next line of text. The size of the text is separated from the vertical spacing measurement by a slash “/”. For example, 9/13 means 9 point text with 13 points of vertical spacing.

VERTICAL SPACING

Compliance	Legal	Primary Access	Public Street
Classification Code	1-5 MH Residential	Street Type and Surface	Local Road Asphalt
Classification Code Description	Zoning allows <u>one dwelling</u> minimum per <u>12,000 sq. ft.</u> including manufactured and modular housing	Typical for Market	Yes

3. **Initial Caps** refers to text set with each word capitalized, unless it is an article, conjunction, or preposition.

*Adjustments to the comparables must be made for special or creative financing or sales concessions. No adjustments are necessary for those costs which are normally paid by sellers as a result of tradition or law in a market area; these costs are readily identifiable since the seller pays these costs in virtually all sales transactions. Special or creative financing adjustments can be made to the comparable property by comparisons to financing terms offered by a third party institutional lender that is not already involved in the property or transaction. Any adjustment should not be calculated on a mechanical dollar for dollar cost of

Table Guidelines

- Tables do not break from page to page UNLESS they are more than one full page long. In this case, the table only breaks before a major table heading (**TB_sub-H1**, **TB-SCA_sub-H1**, **TB-SCA_H2**). Regular text follows below the table on the same page. Table column heads repeat on subsequent pages.
- Standard tables (meaning most tables) set in one page-column width (22 picas) or two page-column width (45 picas).
- Column widths are equal, unless noted in [Part 2. Specific Section Details](#).
- All rules in standard tables are ½ point and 50% black. Rules set top and bottom, and interior verticals only.
- Outermost cells, left and right, do not take a vertical rule unless otherwise noted in [Part 2. Specific Section Details](#).
- Table column heads (**TCH**) only take rule below (no vertical rules between or rule above).
- Table text (**TB**) indents left and right 4 points, 3 points top and bottom from edge of cell.
- Table text (**TB**) sets flush left except if within a stack of numbers or unless otherwise noted in [Part 2. Specific Section Details](#).
- Table text (**TB**) sets initial cap.
- When no content is chosen, cell remains empty. For the Sales Comparison Approach, Rental Information, Cost Approach, and Income Approach only, see [Part 2. Specific Section Details](#) for table/grid specifications.

Comparable Rental Analysis (H1)

Comparable Rental Analysis table differs from standard tables in 3 ways:

- Each part of the table is set off by a .75 point bounding box (closed on all sides); and a 4-point gutter between each part.
- The width of the page is filled by:
 - First column sets as x 7 picas 8 points.
 - 4 points space
 - Second, third, fourth, fifth, and sixth columns set x 4p7 and comprise one grid of a subject property unit and 3 rental comparables.
 - 4 points space
 - Repetition of second, third, fourth, fifth, and sixth columns set x 4p7 and comprise one grid of a subject property unit and 3 rental comparables.
- Each Subject Unit can have 3–7 comparables. If there are more than 3 comparables, after all the information is recorded for the Comps, the leftmost column and the “Subject [Unit Identifier]” column repeat below, followed by “Comparable #” repeating as necessary.
 - For 3 comparables, see layout below. For over 3 comparables, follow alternate layout below.
 - If applicable per the iGuide, an em-dash “—” can appear in a cell instead of other text.
 - For the Subject [Unit Identifier] column, information that is never applicable is grayed out using 10% black tint: “Proximity to Subject,” “Overall Comparison to Subject,” “Adjusted Rent,” “Comparable Weight”.
 - For the Comparables columns, information that is never applicable is grayed out using 10% black tint: “Opinion of Market Rent”.
